Thank you for visiting us!!!

If you have come to this website because you believe that a casting [as-cast or machined] will best serve your needs, you've come to the right place.

We value your time ... therefore, what you read here is short-&-sweet and to the point. Borrowing from a famous line of Joe Friday, the detective on old-time TV ... "JUST-THE-FACTS".

About Us

ABOUT US

Experienced "short-run" casting buyers know that having high-tech equipment is merely a secondary **FACT** for running a "short-run" shop. The most important **FACT** is "PEOPLE !!!"

"PEOPLE !!!" who work together as a team...as a happy family
" " are dedicated to the company's continued success
" " use creativity in solving on-the-job problems
" " love and enjoy doing what they are doing
" " are inspired in " " " " "
" " " gifted in " " " " "
" " " proud of " " " " "

That's how NFM people function in making your parts !!!

DIANA L. MACOSKO - President & General Manager

In late 1997, Diana Macosko gained majority ownership and became President & General Manager. Before taking charge, she enjoyed managing an iron foundry that was considerably larger than NFM ... and she was very good at it. Under her watch of that foundry, she produced all the castings that her company designed for drainage systems in the World Trade Center buildings in New York City.

TED J. MACOSKO - Vice President of Sales & Engineering

Meet Diana's husband, age 82. Some say, "Retire!". He says he is a double-barrelled 41 and having too much fun ... like his worldwide network of like-minded buddies. His long-suit is creativity, having had an early start, pictured below ... the aluminum disc truck wheel that he developed at ALCOA in 1946. And that creativity is on call to work along with you in tackling your metalworking challenges.

Services

SERVICES

The work we are eager to do for you is paid-for in two ways...(1) profiting from sales to you...(2) trusting that, in giving you our very best quotation, we will be invited to bid on your future metalworking requirements. At the very least, you will have gotten our honest response on what you are thinking about doing. As you read on here, you will learn that you are tapping into a wealth of knowledge & experience in the field of metalworking...our no-charge advice may include our recommending that you go in a direction other than a casting.

Of the many kinds of castings [plus other metalworking items] that we can provide, this website features NFM [Norell Foundry & Machine], a producer of aluminum & bronze sand castings [as-cast & machined] with a maximum weight of 200 pounds. For those requirements that are outside of these limits, we serve you from associates at other locations in the United States and off-shore. Nearly all of these associates have their own websites.

The most important **FACT** in many walks of life is a diagnosis done correctly [better said...done perfectly]. All of us are well aware of the importance of a correct diagnosis in the field of medicine to be absolutely sure not to initiate treatment that is in the wrong direction. To provide castings and other metalworking items that best serve our customer's requirements, again, diagnosis is all-important to be sure not to initiate a path that's in the wrong direction.
